

SOLUTION BRIEF

Complete Financial Control for Modern Infrastructure

From cloud to on-prem to AI, Mavvrik gives you the clarity, automation, and governance to make every dollar count.

The Financial Control Challenge

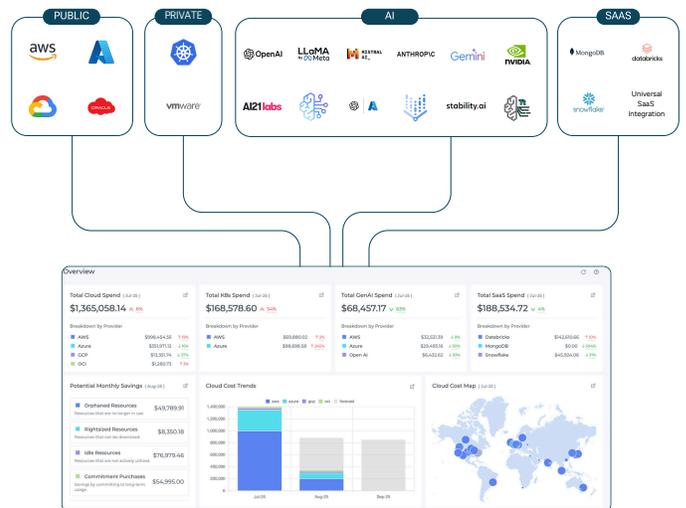

Enterprises running in the cloud face growing complexity. Multiple environments, dynamic AI workloads, and shared infrastructure make it hard to associate spend to value. The result? Missed savings, unpredictable budgets, and margin erosion.

The Mavvrik Solution

Mavvrik is the financial control center for hybrid infrastructure. In one platform, you can see, allocate, and govern all costs, from LLMs to GPUs, SaaS tools to private and public cloud, so you can price accurately, prevent overages, and scale with financial discipline.

Key Capabilities include:

- Unify spend across AI, cloud, SaaS, and on-prem in a single view.
- Automate allocation with accurate showbacks and chargebacks by teams, products, or customers.
- Track AI & GPU costs and usage by model or workload and prevent overages.
- Recover revenue by eliminating underbilling.
- Analyze cost-to-serve by customer, product, and feature to protect margins.
- Enforce governance with budget guardrails, anomaly detection and policy compliance.

See the Impact Before You Sign

With our no-risk proof of value, you'll see your actual cost data, uncover savings, and identify revenue recovery opportunities in just days, before you commit. Once live, customers benefit from:

- 30% average ongoing cost reduction from eliminating waste and inefficiency.
- 7–10x ROI in year one through recovered revenue and cost avoidance.
- Fewer budget surprises with real-time alerts and proactive controls.

“With Mavvrik, we’ve gone from reactive to proactive in managing our cloud investments across Azure, AWS, and Google Cloud. Real-time reporting and automation have transformed how we allocate costs, create guardrails, and manage spend. The difference has been night and day.”
